

What is SecureUp™?

Another premier Affinity product, SecureUp™ is an inexpensive, entirely secure file transfer and sharing application for customers who need to be able to securely send sensitive data to their clients and allow for a secure means of transferring the files back.

Backed by a 512-bit cipher behind a trusted SSL (Secure Socket Layer) certificate on a system on a fast bandwidth pipe that is always available, you'll soon discover why the cost-effective SecureUp™ will become your means of securely transmitting sensitive data.

Please note that version 2.0 of SecureUp™ is currently under development and is expected to be finalized by January 1 of 2011. If you have any questions in the interim, feel free to [contact us](#).
